

Strategic Reorientation to a Changing Automotive Industry:

R+S Technik becomes R+S Automotive

Bocholt/Germany, September 1st, 2020

With about 70 years of experience, R+S Technik is one of the market leaders in the production of tools and machines for the production of interior and exterior components for the automotive industry. As of September 1st, R+S Technik GmbH is now operating under the new name R+S Automotive GmbH.

This change of name reflects the company's development from a locally operating mould maker to an internationally operating system supplier of automation and plant concepts. At the same time, it is important, with a focus to the future, to also position the company structurally to the growing requirements of a constantly changing automotive industry. In the frame of a corresponding program for the future, extensive measures have therefore been implemented in recent months at all locations and in all areas of the company to sustainably increase competitiveness.

R+S will continue to be headquartered in Bocholt, where beside the management, sales, design, development, service and project management are also located. This is also the location of the Pilot Plant inaugurated 2017, where customised plants and tool concepts from R+S can be tested under real production conditions, on an area of more than 1,100 m², together with the customers. The production takes place in the locations in Breitscheid/Germany, Czech Republic, China and the USA.

Brahim Fardouss (42) and Stephanie Klein-Heßling (36) take over the management of the "new" R+S Automotive GmbH. Under this comparatively young but already very branch experienced management team, the company will expand its existing worldwide network and consistently pursue its successful growth strategy.
